

Xtrackers II Germany Government Bond 1-3 UCITS ETF

The aim is for your investment to reflect the performance of the IBOXX € Germany 1-3[®] index (Index). The Index reflects the performance of the tradable debt (bonds) denominated in Euro or pre-Euro currencies issued by the German government. The composition of the Index is rebalanced according to a pre-set methodology. For bonds to be included in the Index on a monthly rebalancing date, they must, on the relevant rebalancing date, have a remaining time to maturity of at least one year and up to three years. The bonds must have a fixed rate of interest and must be part of an issue of debt which has at least €2 billion in principal outstanding. The Index is calculated on a total return basis, which means that amounts equivalent to interest payments are reinvested in the Index. The Index is sponsored by Markit Indices Limited and reviewed and rebalanced monthly. To achieve the aim, the Fund will attempt to replicate the Index by buying a portfolio of securities that may comprise the constituents of the Index or other unrelated investments as determined by the investment manager and the sub-portfolio manager, which are DWS Group entities. The Fund may employ techniques and instruments in order to manage risk, reduce costs and improve results. These techniques and instruments may include the use of financial contracts (derivatives). The Fund may also engage in secured lending of its investments to certain eligible third parties to generate additional income to offset the costs of the Fund. Dividends may be paid on your shares. You may redeem your investment on demand on a daily basis.
